FUN! Vaccinations should be done once a year!

VACCINE

The Rabies Vaccination is vital in order for your dog to have the best chance of maintaining perfect health. This vaccine is also effective against the Canine Parvovirus and Canine Distemper Virus.

OVARIOHYSTERECTOMY SURGERY

We recommend you discuss with your local Veterinary surgeons about the Ovariohysterectomy surgery once your dog is 6 months of age. Having the Ovariohysterectomy surgery reduces the chance of health risks for the dogs themselves, in particular protecting them from the Rabies Virus. In some cases, if your dog is in a difficult position to have this procedure done, you must keep your dog at home or in a closed-off environment. This is strongly recommended if your dog is going through an Estrous cycle.

RUBBISH

If your dog consumes any waste or garbage, there is a very high chance that they may become severely ill or in some cases even die. Maintaining a clean space and environment for your dogs to be in is extremely important.

MEDICINE FOR TICKS AND FLEAS

There is liquid prevention medicine available for ticks and fleas

MEDICINE FOR HEARTWORM

Canine Filariasis is transmitted through Mosquito bites. These worms lodge in a dog's heart and lungs, with the ability to cause heart failure or even death. To ensure this does not happen to your dog, it is important for them to have the Canine Filariasis medicine early on. Before allowing your dog to consume this medicine, please ensure that you take your dog to have a blood test at the vet.

HOW TO CUDDLE YOUR DOG

The best way to hold your dog is to first grab their upper torso, just below the arms and then take one hand to support the bum from underneath.

WATER

Make certain that you are always providing clean and hygienic water to your dog.

VET

Please take your dog to the vet if they are suffering from any of the symptoms below:

- Changes in their personality, Vomiting, Fever, Diarrhea, Loss of weight, Loss of appetite, Blood found in their feces, Consumed something poisonous and signs of shakiness or discomfort.

Additionally, if other symptoms are found in your dogs such as white eye bags and the colour of their gum turning white there is a chance that your dog may be suffering from Anemia.

ALWAYS TAKE CARE OF YOUR DOGS AND HAVE
